## Notes:

(1) Schedule 3 Standard criteria listed in the MECP Air Contaminants Benchmarks (ACB) List: Standards, Guidelines, and Screening Levels for Assessing POI Concentrations of Air Contaminants dated April 2018.

(2) Compound does not have criteria listed in the MECP ACB List and cannot be screened as being emitted as negligible. A maximum ground level concentration request has been included in the ECA application.

(3) Iron emissions from welding are in the form of ferric oxide, therefore criteria for ferric (iron) oxide is used.

B1 - Benchmark 1 - Exceedance of a Benchmark 1 concentration triggers specific actions under the Regulation.

B2 - Benchmark 2 - Exceedance of a Benchmark 2 concentration triggers a toxicological assessment to determine the likelihood of adverse effect.
